##Difference between break and continue

S.No	Break	Continue
1	Terminates the loop completely	Skips the current iteration
2	Control moves outside the loop	Control moves to the next iteration
3	Remaining loop statements are not executed	Remaining statements of current iteration are skipped
4	Used in loops and switch statement	Used only in loops
5	Loop stops immediately	Loop continues execution
6	Commonly used to stop loop on a condition	Commonly used to skip unwanted values
7	In nested loops, exits only the inner loop	Skips current iteration of inner loop
8	Can be used in for, while, do-while	Can be used in for, while, do-while
9	Faster termination of loop	No termination, only skipping
10	Example: stop searching	Example: skip invalid dat
